**Exam** : **700-240**

**Title** : Cisco Environmental  
Sustainability Overview

**Vendor** : Cisco

**Version** : DEMO

**NO.1** Why are many municipal recycling programs not accepting foams?

- A. difficult to recycle
- B. logistically challenging to collect
- C. low recycle return
- D. foams are mostly biodegradable

**Answer:** A

Explanation:

Many municipal recycling programs do not accept foams because they are difficult to recycle. Foam products, such as polystyrene (commonly known as Styrofoam), are lightweight and bulky, making them challenging to handle and process in recycling facilities. The recycling process for foams is also not cost-effective due to the low density and high contamination risk, leading many programs to exclude them from acceptable materials. Instead, these foams often end up in landfills, contributing to environmental pollution. Cisco's sustainability initiatives address such challenges by focusing on the reduction and reuse of materials to minimize waste

**NO.2** Which percentage of all philanthropic dollars are being spent to address the fight against climate change?

- A. less than 2%
- B. 2-5%
- C. 8%
- D. 20%

**Answer:** A

Explanation:

Less than 2% of all philanthropic dollars are currently being spent to address the fight against climate change. This small percentage underscores the need for increased funding and resources to tackle climate change effectively. Enhancing investment in climate change initiatives is crucial for making significant progress in mitigating its impacts and promoting sustainability

**NO.3** Which percentage of customers are willing to pay more for products manufactured sustainably?

- A. less than 25%
- B. 50%
- C. 66%
- D. 89%

**Answer:** C

Explanation:

66% of customers are willing to pay more for products that are manufactured sustainably. This reflects a growing consumer awareness and demand for environmentally responsible products. Companies like Cisco leverage this trend by emphasizing their sustainability practices and incorporating them into their product development and marketing strategies. This data is supported

by various consumer surveys and market research studies on sustainability preferences (Cisco Blogs) (Impakter). <https://blogs.cisco.com/csr/net-zero-methodology-yes-it-is-complicated-but-worth-doing-thoroughly>

**NO.4** How many tons of food is wasted worldwide each year?

- A.** 1.3 billion
- B.** 2.2 billion
- C.** 8.5 billion
- D.** 10 billion

**Answer:** A

Explanation:

Approximately 1.3 billion tons of food are wasted worldwide each year. This substantial amount of food waste contributes to environmental degradation and highlights the need for more effective waste management and sustainability practices. Reducing food waste is critical for improving food security and minimizing the environmental impact of food production and disposal
